ABOUT THE WORTH INNOVATION LAB PROGRAMME:

The WORTH Initiative Innovation lab programme has been created to build the capacity of environmental/ climate change civil society actors on the nexus between sexual and reproductive health and rights (SRHR), climate change and innovation enabling them to create the best advocacy and programmatic solutions for the interlinked challenges faced at the grassroots, national, regional, and international levels.

The lab programme consists of two physical innovation labs and an online learning course spanning over a period of 5-6 months. The labs will contain a mix of presentations and participatory exercises that will equip the participants with the needed skillset and tools to innovate new solutions for the challenges that exist in the nexus between SRHR and climate change.

The lab programme will have a high emphasis on learning and knowledge sharing. We want to bring together bright and creative minds to come up with the solutions we need to counter the great challenges resulting from the intersections between climate change and SRHR.

Participation in the labs is free of charge and the participants' travel costs will be covered. In return, we expect participants to put in the necessary efforts before, during and between labs so that we can jointly come up with the best ideas.

The WORTH Initiative also establishes the WORTH Initiative fund, which can provide a number of small grants for lab participants with the best ideas. The purpose of these grants is to give the participants the opportunity to give life to their ideas and test them in real life. Only those who participated in and completed the WORTH innovation lab programme are eligible to apply for WORTH Initiative funds.
